SN$_B$ shell: $M_{sh} \approx$ 5-10 M$_\odot$,
$v_{sh} \approx 10^4$ km s^{-1}, solar composition
radiatively heated material
(heating declines outward)
observer
wind gap: $\dot{M} \approx 10^{-3}$-3×10^{-2}
M$_\odot$ yr^{-1}, $v_w = 100$ km s^{-1},
$\rho \propto r^{-2}$
forward shock at the
shell/wind interface
SN$_A$ ejecta at 400 d: metal rich
(He,C,O,Si,Ca,Fe), homologous,
$v \approx$ 1800-10 000 km s^{-1}
